Schema i n s p e c t o r

Schema Inspector offers an easy and fast way to compare and synchronise schema elements of SQL Server databases whether live, test, snapshots or partial databases. Any changes can be checked speedily and easily without errors.

It can save your development team lots of time and help you achieve your project delivery accurately and on time. Schema Inspector works in tandem with our Data Inspector and both combine with our SQL Everywhere to make a uniquely **integrated** "one stop" solution for all SQL developers and administrators alike.

You can confidently use Schema Inspector and Data Inspector to save hours of development time whether developing new SQL Server databases or migrating old systems over to new.

The savings in development time will make a significant contribution to the ensuring **your** project will deliver solutions to your users on-time and on-budget.

Features include:

- Synchronisation, direct or by script
- Setting up comparison scenarios for repeatable deployments
- Full support for SQL Server 2000, 2005 & 2008

Advanced features:

- Comparison with snapshots
- Snapshot tool
- Advanced filtering allows objects to be quickly excluded / included from synchronisation, based on any criteria

Future features:

- Migration support
- Migration editor
- Migration runtime
- API Access

Editions Available

Professional	\$119
Personal	\$49
Community	\$0
